

Home Page

This is the home screen for the EatWithFriends application. The main purpose of this page is to quickly browse available meals to join, as well as popular food being served at dining locations near you.

Additionally, you have the ability to set your status. For example, you can state whether you are currently looking for someone to eat with, are currently eating and want to welcome others to join you., or are not interested in eating with others.

Tabs at top of screen let you switch between home screen, meals, and dining locations page.

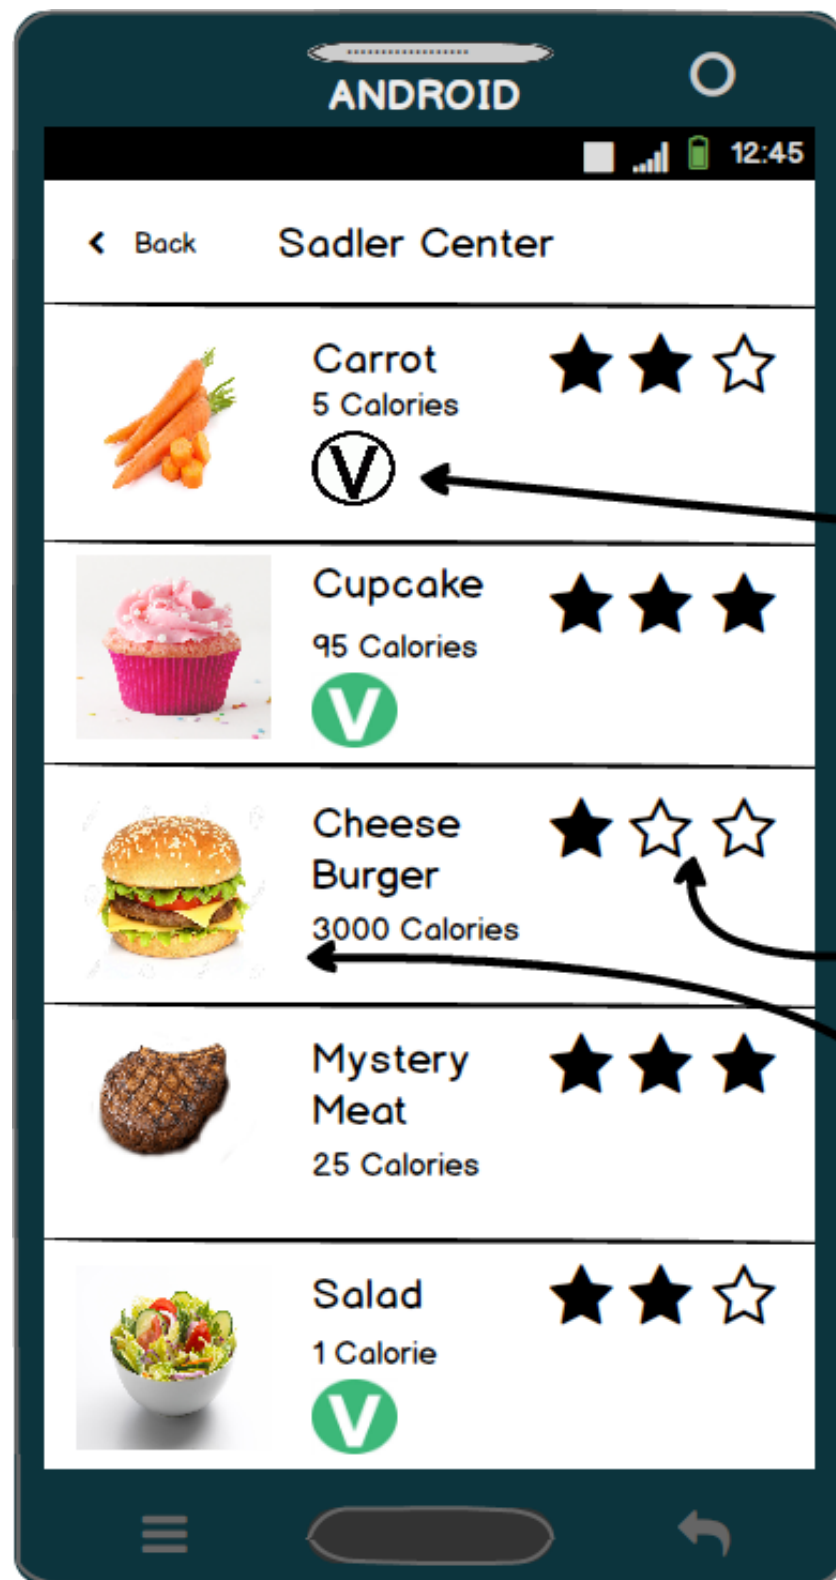

There are two cover flow objects to quickly display suggested meals or top rated food.

[← Back](#) Dining Locations

Note: In the actual application, the user will simply click anywhere in the row to view that location's details.

Location Details

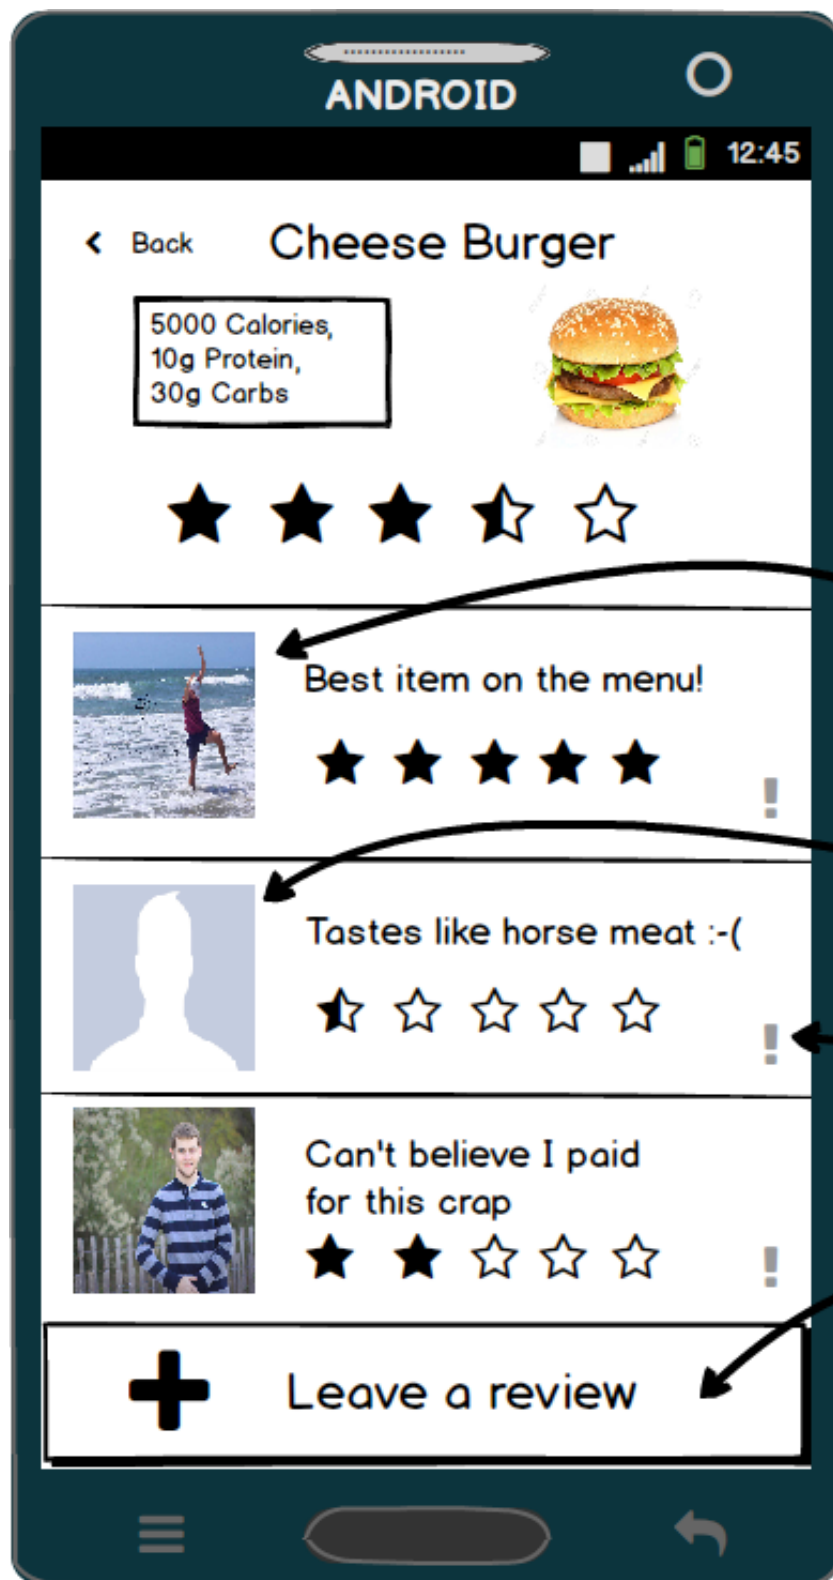

The location details page allows the user to view more information about a particular dining hall, specifically what food is being served and what kind of reviews it's getting.

In addition to the thumbnail image and calorie information, symbols displaying whether a food is vegan, vegetarian, gluten-free, etc. are shown.

A snapshot of the rating in stars is also shown.

Click the Cheese Burger image or text to navigate to the dish page.

Note: In the actual application, the user be able to click anywhere on that dish's field (except for the stars) to be taken to the next page.

Dish Page

This page gives a more detailed look at each meal being served at a specific dining hall.

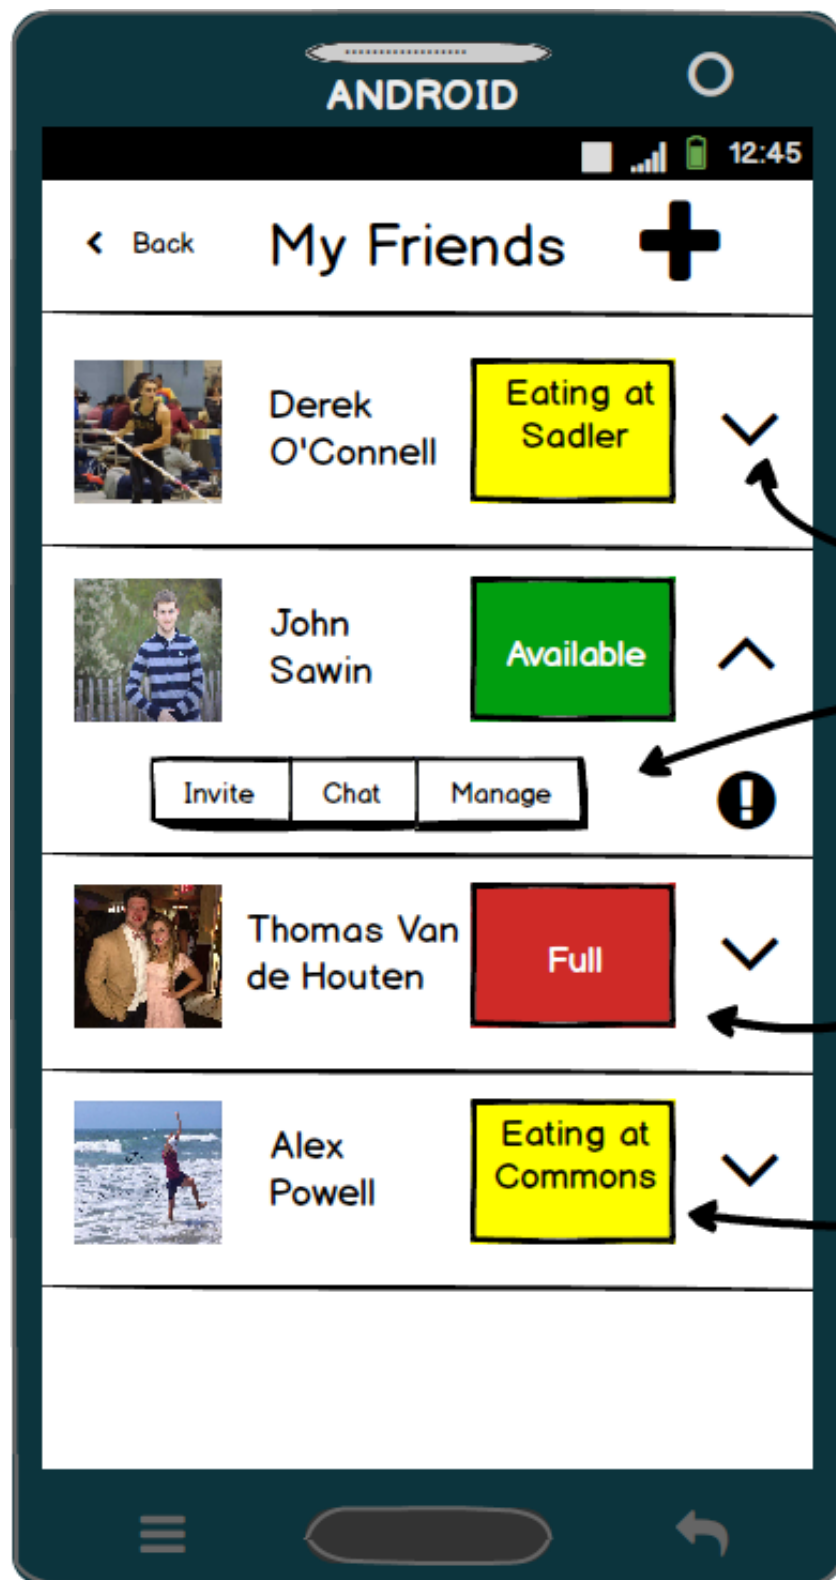

At the top the full nutrition info is displayed as well as a photo and rating.

Down below, student reviews for the specific meal are shown. A rating comes with a text description and a star rating.

Note: The ratings show a user's profile which ideally would be linked up with some social media site like Facebook. However, users have the option to remain anonymous if they want.

Users have the ability to flag reviews that are offensive, obscene, or just unproductive.

Finally, we encourage users to leave their own reviews after they have finished a meal. To leave a review, there is a button to click at the bottom of the page. Upon being clicked, a form pops up to fill out the review.

Friends Page

The friends page shows others in your social "circle" that you may want to eat with. We chose to use this friends approach to avoid the situations where someone you didn't particularly like tried to eat with you.

Upon clicking one of the arrows by someone's name, their profile expands slightly to display more options of how to interact with them (progressive disclosure).

Also, each friend's status is clearly displayed next to their photo to make it easy to determine if they're free to grab a meal with. In addition to a textual description the statuses are clearly color coded to indicate

For on-going meals, click the status button to be taken to the specific meal details.

Meal Page

The meal details page shows more details about a meal that you can join.

There's a simple button that lets you join a meal if you have not already, or "leave" a meal if your plans change.

Again, progressive disclosure is utilized with the expanding profiles to maintain the overall clean look of the application.
